

A Crawfish Boil

When you check the recipe for boiling the crustaceans, it starts out with take a 60-80 quart boiling pot, with a strainer insert... and I am storing this where in the camper?

A proper table setting for a boil with friends.

To eat crawfish grasp the upper body (carapace and head) with two fingers and the tail with the other hand's two fingers. Twist and pull it apart...suck the head juices out if you are so inclined, crack the tail and wiggle it then squeeze out the white meat. Dip, eat and go on to the next.
